

GERM WARFARE STARTS IN YOUR OFFICE!

YOUR WORLD IS AT RISK...

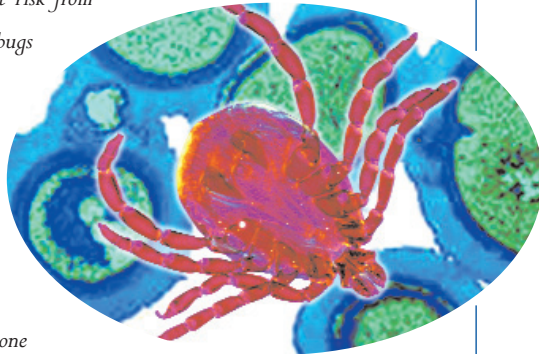

Today's office environment is more at risk from germs, viruses, mould, dust, dirt, and bugs than ever before. Modern technology has brought faster more efficient communication, but also greater opportunities for bugs and germs to multiply, dust and dirt to settle, and infection to spread.

How many of us on occasion use someone else's telephone, headset, or computer keyboard?

How many Call Centres take care to clean equipment after each change of staff?

How many of us clean our office equipment regularly?

Today's office is at risk, so the need to clean – and clean properly – has never been more important to reduce the risk of infection and reduce the number of man hours lost through illness.

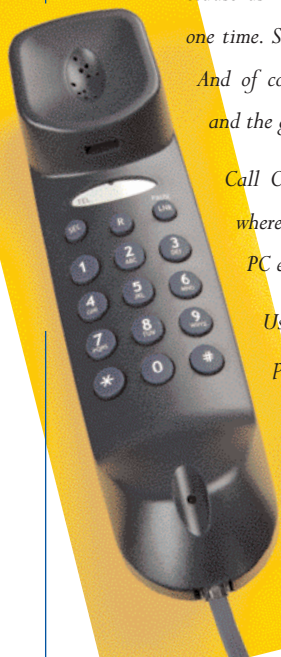

YOUR PHONE IS PROBABLY BUGGED...

Because as many as 2000 bugs can live on a telephone mouthpiece at any one time. So it's no wonder that germs and viruses can spread like wildfire. And of course, the more the phone is shared, the more germs and bugs, and the greater the risk of infection.

Call Centres and other hotdesk situations are particularly vulnerable, where in an average day 3 shifts of people could be sharing headsets and PC equipment, so the number of germs can quickly multiply.

Use of AF dedicated products can drastically reduce the germ population and thus reduce the risk of infection from flu and other cold viruses.

The best selling Phoneclene is perfect for daily cleaning and sanitising all your telephones, and Headsetclene has been specially developed to clean delicate headset mechanisms without compromising audio quality.

BEWARE OF PRESSING THAT BUTTON...!

Because you don't know what could be lurking in your keyboard.

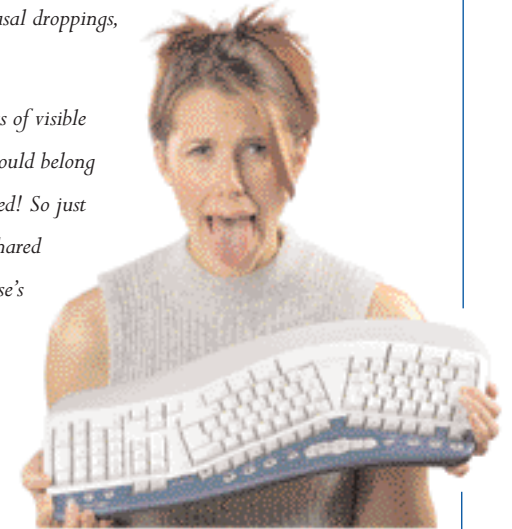

Saliva, food particles, dead skin cells, nasal droppings, body fat, hair – we could go on!

The fact is that keyboards catch all sorts of visible and invisible nasties and those nasties could belong to someone else if your keyboard is shared! So just by touching your mouth after using a shared keyboard could mean eating someone else's skin! A horrifying thought.

Regular keyboard cleaning is essential to get rid of these horrors. Use the best selling Sprayduster and the powerful

air jets will blow away

debris and dirt, and clean those keys with Ultraclene anti-bacterial wipes to keep them free from germs and working efficiently.

IS SHE REALLY THE TREASURE YOU THOUGHT...?

Possibly. But however efficient your cleaning staff, if they use traditional wax-based cleaners and dusting cloths – particularly on telephones – they are spreading germs at every wipe and creating the perfect breeding ground for germs to thrive. So the more they wipe, the more harm they are doing.

Computer and office equipment requires specialised cleaning, and the AF range of dedicated products has been developed specifically to clean modern communications equipment.

These leading products are the result of many years of intensive research and development and the highest quality of manufacturing process.

Work Smart, Work Clean...
